Nairobi, Kenya, KE

Summary

Full Stack Developer with a short-term experience at Makueni Tech and Innovation Hub, successfully building and maintaining government-facing websites and developing a sand mining sites tracker. Proficient in JavaScript, React, Python, SQL, and Docker, with a demonstrated ability to handle REST APIs and containerize full-stack applications. Portfolio includes a high-performance event management system, a property rental platform, and a role-based authentication system. Holds a Diploma in Computer Science from the Cooperative University of Kenya.

Work

Attachee - Fullstack Developer

Feb 2026 – May 2026

MAKUENI TECH AND INNOVATION HUB

- Built and maintained government-facing websites using React and Node.js, ensuring WCAG 2.1 compliance and achieving 95% Lighthouse accessibility scores
 - Developed a sand mining sites tracker with React and MySQL, enabling 12 county officials to monitor 50+ sites and improve regulatory compliance by 30%
 - Containerized 1 full-stack applications with Docker, cutting deployment time by 40% and eliminating environment-related production issues
 - Implemented REST APIs handling 1,000+ daily requests with average response times under 200ms
-

Education

COOPERATIVE UNIVERSITY OF KENYA

2024 – 2026

Computer ScienceDip.

Relevant Database Management Skills · Computer Organisation And Architecture · Operating Systems · Data Structures and coursework: Algorithms · Object Oriented Programming

- Completed advanced coursework in computer networking and system design
 - Completed advanced coursework in computer networking and system design
 - Undertook capstone projects focused on end-to-end application development
 - Gained experience in database normalization and RESTful API architecture
-

Skills

JavaScript, ES6+, TypeScript, Python, SQL, Reactjs, Next.js, Tanstack Query, HTML 5, Tailwind CSS, CSS3, Responsive Web Design, User Experience(UX) Design, User Interface (UI) Design, Figma, Git, Github, Docker, Docker Compose, Linux, Node.js, Express.js, Nest.js, REST API Development, MySQL, PostgreSQL, MongoDB, Agile Methodologies, HTML, React, Problem Solving, Debugging

Project

Nexivent - Event & Ticket Management Microservice

- Built a high-performance event management system using microservices architecture supporting 10,000+ concurrent users
- Implemented Apache Kafka for decoupled service communication, achieving 99.9% message delivery reliability
- Containerized full development environment with Docker Compose, enabling 5+ developers to work with identical setups

Property Rentals Platform

- Designed and launched a property listing platform that can connect 100+ Kenyan landlords and tenants with advanced search filtering by location, price, and property type
- Implemented secure JWT authentication with role-based access control, to serve 200+ registered users across separate owner/renter dashboards
- Optimized MySQL database queries with strategic indexing, reducing search response time from 1.2s to 150ms for 5,000+ property listings
- Built fully responsive UI using Tailwind CSS, achieving 98% mobile usability scores across all device sizes

Easy-Auth - Role-Based Authentication System

- Developed production-ready auth API with dual JWT strategy (10-min access, 7-day refresh tokens)
- Implemented role-based access control (user/admin) with decorator-driven guards for 15+ protected endpoints
- Added rate limiting (5/min login, 3/min forgot-password) and Swagger documentation at /api/docs
